

INTEGRAL'S EMERGENCY "FALL-AWAY ARM" TECHNOLOGY ... Security, Safety and Peace of Mind

● Customers exit calmly through an emergency point of egress

● Provides audio and visual alerts to notify customers during emergency measures

● Drops automatically when emergency or fire alarm is activated

● Integrated "traffic calming" railing system (optional)

SG-2000-R-FA-T

Sheriff double arm security gate (right)
Fall-Away system with integrated railing system (option)

Patent Pending

Integral's new optional **"FALL-AWAY ARM" Technology**, for greater security and peace-of-mind in an emergency or crisis in your store. Now, the barrier arms "fall-away" automatically when an emergency or fire alarm is activated. This will allow easy access to the stores point of egress. Protect and reassure your customers, while at the same time prevent retail theft and product loss.

The SHERIFF: retail entrance security, now with “FALL-AWAY” ARM TECHNOLOGY

The Integral “SHERIFF” is by far, the industry “gold” standard in retail entrance security. This double-arm security gate system is engineered to control incoming customer traffic, but now incorporates the added safety, security and peace of mind your store needs in the case of an emergency.

Integral’s new optional “FALL-AWAY” Arm Technology, is building code compliant in the case of emergency or crisis in your store. When an emergency or fire alarm is activated, a dry contact signal is sent from the fire panel to the Sheriff console. The barrier arms then “fall-away” automatically. This allows easy out-going access through the stores point of egress.

The “fall-away” arm technology can be ordered as an option for both Sheriff and Deputy models and will protect you, your employees and your customers while at the same time prevent retail theft and product loss.

NOW, THERE’S A NEW, “SAFER” SHERIFF IN TOWN!

- Compact - saves valuable floor space by reducing the large area devoted to bulky and out-dated turnstiles
- Safe - wheelchair, scooter and baby carriage compliant. It allows access through an un-impeded single entrance lane. Unlike traditional turnstiles which prevent non-ambulatory customers from entering the store
- Interactive - in normal operational mode, the system features a pleasant, customizable “greeters” voice track when customers enter the store
- Comforting - In an emergency, the system automatically provides audio and visual alerts to “calm and direct” staff and customers during emergency measures
- Secure - built-in system intelligence, blocks all attempts to exit through the entrance but allows you and your staff, complete manager override control functions
- Built to last - durable, stainless steel components are easy to clean and maintain

NOT JUST A GATE BUT A VIRTUAL ELECTRONIC SECURITY GUARD
